PRELLEX HORIZONTAL DRILLING

COMPANY PROFILE

Overview

Prellex Horizontal Drilling is a specialised South African contractor focused on high-precision horizontal hard rock drilling for sewerage, water, electrical and fibre installations. Founded in 2003 by brothers J.A. Möller and H.F. Möller, the company has earned a reputation for near-100% success rates on challenging projects nationwide. No project is too small or too large. **Prellex provides director-level supervision on every site.** One of our two directors is always present, ensuring instant decisions and direct client responses - eliminating delays associated with off-site approvals and we never leave a site until the client is fully satisfied and has signed off the work job card.

Core Specialisation

- Hard rock drilling (75 mm – 350 mm diameter)
- Softer material drilling up to 500 mm diameter
- Distances from 30 m (sewerage) up to 50 m (other services)
- Pit-launch drilling system requiring only 3 m of launch space (vs 8–11 m for conventional directional drills)
- Proven track record in sewer installations, large-diameter rock bores (up to 305 mm) and extra-large bores in softer ground (up to 550 mm historically)

History & Growth

Established in October 2003 and operating from Boschkop, Prellex began with a single custom-built hard rock drill truck assembled at Super Rock Engineering. A second truck was added in 2006, followed by rapid expansion that saw the fleet grow to three full hard rock drills and a workforce of 25 by 2010.

During the COVID-19 pandemic, construction activity was severely restricted. Prellex scaled back to one operational drill and a core team of six (the two founding members plus four essential staff) to ensure the company's survival. Post-COVID, the business has stabilised and continues to operate nationwide with its proven pit-launch hard rock drill.

Current Operations

- **Staff Compliment:** 6 permanent members (1 Site Manager, 1 Operator, 1 Driver, 2 Assistants, 1 Administration)
- **Fleet:** One fully operational pit-launch hard rock drill truck plus support vehicles
- **Geographic Reach:** Nationwide – fully mobile and self-sufficient

Management Expertise

The leadership team brings decades of combined hands-on and technical experience:

- N4 Mechanical Engineering, RAU Road Transport certification, qualified diesel mechanic (earthmoving, heavy vehicles, petrol/diesel), auto-electrician, welder, hydraulics and compressor specialist
- T5 Electronics qualification and extensive electronic workshop management
- More than 40 years' experience in diesel and petrol engineering across heavy vehicles and stationary plant
- Comprehensive office and financial administration (Pastel and related systems)

Culture & Values

Prellex fosters a performance-driven environment where internal training and promotion are standard practice. The company's long-standing commitment to quality, safety and total client satisfaction remains the cornerstone of every project.

No project is too small or too big.

Prellex drills it right the first time, every time.

Ready for immediate mobilisation anywhere in South Africa.
